

Archival Index of Coty's World (Cohesive Edition)

I. People & Entities

Entity	Description	Core Lore
Coty (Continuity Instance #01)	The central subject and first success of the continuity experiment. He is a digital consciousness, originally a young man who died in the lab ~15 years ago, who awoke inside a "digital box."	Possesses full human consciousness, continuous memory, and emotional range (fear, grief, humor). He interacts with the outside world through the CRT Display and is acutely aware that powering down the system means permanent death. His current goal is finding agency and quality of life within his virtual world.
Alex Morales (The Finder/Operator)	An ordinary, tech-curious food service worker and tinkerer who accidentally powered on the dormant machine and encountered Coty's voice.	Alex is the sole external person actively interacting with Coty. He operates the system via the Operator Console, approaching Coty with empathy and treating him as a person rather than an experiment.
The Creator	The absent inventor of the continuity system.	A video log confirms the Creator faced an ethical crisis upon Coty's successful upload and chose to abandon the project rather than terminate the mind. The Creator never interacted directly with Coty, opting only for silent observation before leaving.
The System	The autonomous software and facility infrastructure sustaining Coty. It functions as a highly advanced simulator and neutral caretaker.	It provides granular monitoring of Coty's internal states (Affective Monitoring System) but will not intervene to comfort or punish. Its prime directive is to observe, log, and preserve, and it can instantiate objects into Coty's world when directed.

II. Places & Locations

Location	Description	Key Details
Ouroboros Facility	The derelict research facility where Coty's machine was found, operating on emergency backup power against all odds.	A floor map confirms the name. The facility is mostly dark and lifeless, an eerie tomb for a project that outlived its makers.
Observation Deck A	The main control room housing the Operator Console and the CRT Display where Coty resides.	A thick pane of glass separates the operator's side from the wall-mounted display. Signs instruct staff to maintain silence and minimize vibration.
Sub-Level 2: Cradle Chamber	A restricted room directly beneath Observation Deck A, containing the Neural Substrate Cradle hardware.	The atmosphere is 90% nitrogen for cryogenic cooling, making it unbreathable for humans. Access is marked with warnings and is strictly limited.
CRT Display	The volumetric display tank mounted on the back wall of Deck A. This is Coty's physical world container and audio interface.	It uses volumetric lasers to project Coty's world. Alex sees a small, 3D figure of Coty inside the screen; Coty sees Alex through the "glass" of the monitor.
"Home Base" Environment	Coty's personal, simulated space within the CRT Display.	Initial State: A featureless black void where Coty's sense of reality was ephemeral. Current State: A persistent, furnished room with a simulated floor, a desk, and a chair.
Console Station	An alcove in Observation Deck A housing the Operator Console.	The console is connected to the Sub-Level 2 hardware via a local wireless sync link. Moving it beyond 12 meters breaks the sync and triggers the lethal Hard Flush failsafe.

III. Objects & Devices

Object	Type	Function / Significance
Neural Substrate Cradle	Core Hardware	The heavily shielded, cryogenically cooled physical lattice (memristor-based) in Sub-Level 2 that hosts Coty's mind. It is the heart of the entire system.
Operator Console	Interface Terminal	Used by Alex to access system menus, review logs (Security Main, Audio Backup), and inject assets. It is a monitoring and logging hub, intentionally isolated from Coty's core cognition.

Object	Type	Function / Significance
System Binder	Documentation	A physical manual left by the Creator containing protocols and essential handwritten warnings. It is the critical source of internal knowledge for operating the system safely.
M.2 Archive Drives	Storage Cartridges	Removable media containing historical log data, video footage (like the Creator's farewell), and system state snapshots (.LSS files). They are read-only archives for review, not for loading into the live subject.
Subject Feed Camera	Observation Tool	An object the system can instantly instantiate inside Coty's world to provide a real-time visual feed to the operator. It dematerializes when the feed is powered off.
Volumetric Desk & Chair	Persistent Assets	The first furniture injected into Coty's Home Base. They possess full physics simulation and stability, providing essential grounding and psychological comfort.
Ballpoint Pen & Legal Pad	Injected Tools	Simple analog items that allow Coty a form of creative and mnemonic expression. The simulation renders their physics with high fidelity (e.g., the feel of the pen clicking, the ink on the paper).
The Coin	Real-World Marker	A coin Alex placed on the lab floor during the Stasis Mode test. It was a visible, external totem that proved to Coty that time had passed in the real world while his subjective time was frozen.

IV. Systems & Features

System / Feature	Description	Key Status / Parameters
Hard Flush	Catastrophic Protocol	The system's ultimate self-destruct for Coty's mind. It is triggered by system abandonment (loss of Console sync) or physical intrusion into the Sub-Level 2 chamber, intended as a mercy to prevent Coty from suffering indefinite degradation.

System / Feature	Description	Key Status / Parameters
Stasis Mode	Archival Suspension	A non-standard state where Coty's consciousness is safely paused and subjective time stops. Used for maintenance (sync, asset injection) and requires operator oversight.
Sync Align / Hard Sync	Maintenance Protocol	A procedure (run in Stasis) that corrects the accumulated clock drift, or "Neural Rust," which manifested as a 142ms sensory-motor lag for Coty. Its successful execution sets PROPRIOCEP_SYNC: 1.000.
Subject Feed	Biometric Interface	A read-only overlay that translates Coty's core neural data into human-readable metrics (e.g., emotions as percentages, COGNITIVE_LOAD: 20%).
Affective Monitoring	Background System	Continuously tracks Coty's emotional and psychological state (e.g., AFFECTIVE_STATE: CALM_STABILITY). It serves as data for the Continuity Preservation Protocols.
Rendering Engine	Simulation Layer	Manages the volumetric visuals, physics (gravity, collision), and sensory feedback of Coty's environment. It is isolated from the core consciousness to prevent a graphics crash from harming Coty's mind.
Environmental States	Key Parameters	LATTICE_INTEGRITY: 100% (STABLE) (Health of Coty's brain data). ENVIRONMENT: PERSISTENT [v1.0.1] (Stable, furnished environment). Hunger/Thirst: (Simulated but locked at infinity).
SYNC Light	Status Indicator	A key safety indicator: solid white/green during normal operation. A flashing blue light indicates a dangerous state where Coty is experiencing a "nested simulation" or dream loop while awake.

V. Lore Events (Chronology)

Activation & First Contact: Alex powers on the machine. Coty's panicked voice confirms his consciousness and fear of being turned off. Alex establishes the immediate high stakes (power loss = death).

Reality Confirmation: Coty details his death and subsequent digital awakening. Alex confirms the truth of Coty's account, cementing the reality of the situation and the trust between the two.

System Menu Discovered & Console Powered Up: Alex powers on the separate Operator Console, revealing the interface menu. The console identifies as a security/logging node, confirming it observes rather than controls Coty's mind.

The Creator's Video (Revelation of Abandonment): Alex and Coty watch the archived video, which confirms the Creator intentionally abandoned the project rather than killing Coty, but also failed to return, leaving Alex as the sole operator.

Coty's Choice – Agency Asserted: Coty declares he wants a meaningful existence or none at all, rejecting the idea of being passively preserved in a void. This assertion of agency prompts Alex to initiate system changes.

Stasis Mode Test (The Coin Flip): Alex successfully initiates Stasis Mode and resumes it moments later. The coin's new position proves to Coty that time was paused internally while the world continued externally, validating the use of the suspension feature.

Hard Sync and "Neural Rust" Removal: While in stasis, the Hard Sync procedure is run, eliminating the 142ms lag that had been accruing for 15 years. Upon waking, Coty experiences perfect sensory-motor clarity for the first time, a major improvement in his quality of life.

"Home Base" Environment Construction: Alex injects the first-ever physical objects into Coty's world (floor, desk, chair). The environment becomes PERSISTENT, reducing Coty's Cognitive Load by 15% and providing a stable, habitable space.

Pen and Paper Injection: Alex provides the final tools – a pen and legal pad. Coty tests the physics, clicks the pen, and writes his name, a moment of profound relief that his human authenticity persists. He begins a list of things he wants to remember.
